## Control Sound, Save Energy

### PATENTED TECHNOLOGY

Can you imagine living without sound? The sound of a river, the wind, a storm, flowing water or even laughter? Neither can we.

With **MSX technology** we are going beyond the possible, **by controlling sound** and bringing **new innovative solutions** in **energy saving applications**.

We have chosen **the water**. By **controlling the sound of the water** we can precisely **determine its temperature** and consequently its **optimal boiling conditions**.

With this **state of the art technology**, we can **save up to 20% of energy** during the preparation of your favorite drink.

**We strive to improve quality of life by providing innovative energy saving solutions.**

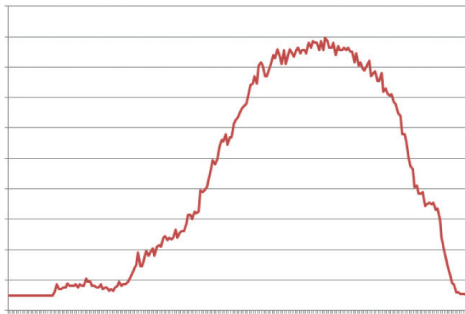

## Advantages

With an **innovative electronic control system** offering **accurate temperature setting**, water can be heated to selected temperatures for tea, coffee, hot chocolate, cold remedies and other beverages, whilst achieving an **energy saving of up to 20%**.

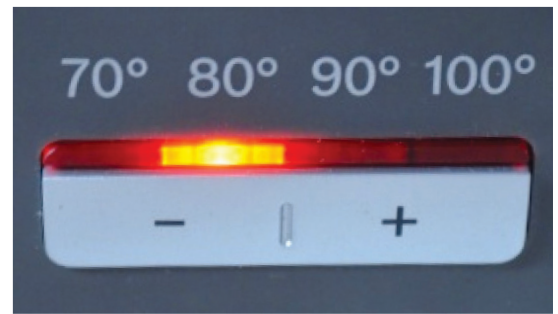

There is **no** requirement for **steam management**, **reducing manufacturing costs** and providing considerable **design freedom**. The control is supplied with no user interface (MM) – this is **provided by the OEM**.

### Key benefits:

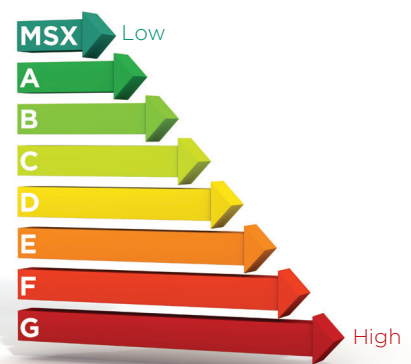

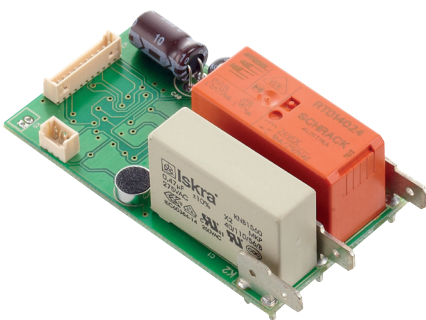

- **Up to 20% energy saving compared to existing products on the market**
- Innovative high tech – low cost technology
- No over-boiling
- Safe and user friendly
